Recidivism and Energy Justice

Formerly incarcerated individuals face high recidivism due to a lack of support, while **climate change disproportionately impacts underserved communities**, leaving them vulnerable to energy burdens, environmental racism, and natural disasters.

- Electrivate seeks to provide substantive **workforce development opportunities** for formerly incarcerated individuals in the clean energy space.

Buildings are Responsible for 40% of Global GHG Emissions

Reimagining the Built Environment:

- Advocates for reducing GHG emissions in residential and commercial buildings.
- Promotes the transition away from fossil fuel energy systems.
- Focuses on the protection and preservation of land and water resources.

Thriving in the Green Economy:

- Equips individuals with marketable skills in electrification and energy efficiency.
- Provides pathways to meaningful employment.
- Ensures community resilience against economic challenges while advancing sustainability goals.

Empowering Green Futures,
Building Sustainable Communities
